Introduction

The Operating Model defines how Pivot Teamwear (Pivot) delivers value to its customers through its people, processes, systems and operational governance. It provides a common understanding of how the business operates and establishes the framework for consistent delivery, future growth and continuous improvement.

The document describes the business model, operating principles, customer journey, fulfilment model, operational roles and the assumptions that underpin the business.

As Pivot evolves, this document will be reviewed and updated to reflect changes to the operating model while maintaining alignment with the strategic direction of the business.

Business Overview

Pivot is a locally owned teamwear business providing custom uniforms and associated apparel to sporting clubs throughout Greater Bendigo.

Pivot partners with sporting clubs to manage their teamwear requirements, from product selection and design through to manufacturing, quality assurance, delivery and ongoing support. The business operates through standardised products, streamlined processes and local service to provide a reliable and simple teamwear experience.

Pivot will initially validate its operating model through a controlled pilot with Phoenix United Basketball Development Club (Phoenix) before expanding to additional sporting clubs across Greater Bendigo.

Business Model

Pivot provides affordable, high-quality custom teamwear and associated apparel through a simple, managed ordering and fulfilment model.

Sporting clubs' partner with Pivot to establish an approved range of standardised branded apparel through a controlled design process. Approved products are made available through a dedicated club store, providing members with a simple way to select products, provide sizing information and place orders during defined ordering periods.

Pivot manages the end-to-end process, including club onboarding, design configuration, club store setup, order consolidation, quality assurance, manufacturing coordination and local fulfilment. Standardised processes and supporting systems enable efficient delivery while maintaining a simple customer experience and local service.

Revenue is generated through the sale of apparel, with a lean operating model designed to reduce administration for clubs and support sustainable growth.

Operating Principles

Pivot operates in accordance with the following principles:

PRINCIPLE	DESCRIPTION
-----------	-------------

Customer First	Deliver a reliable, simple and professional experience that places the needs of the customer at the centre of every interaction.
Affordable Quality	Provide high-quality custom apparel at competitive prices without compromising customer experience or product quality.
Local Service	Build trusted customer relationships through responsive local service and fulfilment throughout Greater Bendigo.
Simple, Repeatable Processes	Use consistent processes and documented ways of working to reduce complexity, improve reliability and support sustainable growth.
Continuous Improvement	Regularly review processes, customer feedback and operational learnings to improve service and outcomes.

Operating Model

Pivot operates through a managed teamwear service model that combines standardised processes, supporting systems and local operational oversight to deliver consistent customer outcomes.

The operating model is designed to minimise unnecessary administration through repeatable processes while retaining human oversight where judgement, quality assurance and customer service provide greater value.

This approach enables Pivot to maintain a simple customer experience, reliable delivery and sustainable growth within the Greater Bendigo community.

Customer Journey

The customer journey defines the end-to-end experience from initial engagement through to ongoing ordering and support. Pivot is designed to provide a simple, largely self-service experience supported by local assistance where required.

STAGE	DESCRIPTION
Enquiry	The customer contacts Pivot to discuss their teamwear requirements.
Onboarding	The customer is onboarded and provides their branding, requirements and club information.
Product Selection	The customer selects products from Pivot's approved apparel range.
Product Customisation	The customer creates a fully customisable visual design within Pivot's approved garment products and supplier-validated production geometry. Designs remain subject to applicable manufacturing, product, sport, competition, brand, legal and approval requirements.
Approval	The customer reviews and approves the final product designs and club store configuration. Club approval alone does not release work to manufacture.
Store Configuration	Pivot configures the customer's club store using the approved products, branding and content.
Store Launch	The customer's dedicated club store is made available to members.
Ordering	Members browse approved products, determine sizing and place orders through the club store during the ordering window.
Manufacture	Orders are consolidated and submitted for manufacture.
Fulfilment	Completed orders are received by Pivot, quality checked and distributed to the customer through the agreed fulfilment method.
Ongoing Support	Pivot supports future order windows, new products, design updates and customer enquiries.

Technology & Automation

Technology underpins Pivot's operating model by simplifying customer interactions, reducing manual administration and supporting efficient business operations. Systems will be selected and developed to improve reliability, consistency and scalability while maintaining a simple experience for customers and administrators.

Automation will be applied wherever practical to support repeatable, rules-based activities. Human oversight will be retained for quality assurance, exception management and customer support.

Technology capabilities include:

CAPABILITY	PURPOSE
Customer Portal	Supports customer onboarding, product management and club store administration.
Product Customisation	Allows customers to create fully customisable visual designs within approved garment products and supplier-validated production geometry.
Club Store	Provides each customer with a dedicated club store for member ordering.
Order Management	Consolidates customer orders and supports order validation prior to manufacture.
Manufacturing Integration	Transfers approved production information to manufacturing partners.
Business Administration	Supports pricing, customer management, reporting and operational administration.
Communications	Provides customer notifications and order status updates where appropriate.

Roles & Responsibilities

Pivot's operating model combines customer self-service, business automation and operational oversight. Responsibilities are allocated to the party best placed to perform each activity.

ROLE	RESPONSIBILITIES
Customer	Establish organisation details, customise approved garment products, approve club decisions through the authorised administrator, participate in ordering windows where applicable, and place orders through the club store.
Pivot	Manage customer relationships, oversee business operations, maintain product offerings, independently review designs, control release to manufacture, perform quality assurance, coordinate fulfilment and provide ongoing customer support.
Systems	Support customer onboarding, product customisation, club store management, order processing, notifications, reporting and other automated business processes.
Manufacturer	Produce approved products only from information authorised by Pivot and deliver completed orders to Pivot for fulfilment.

Fulfilment Model

Pivot manages the fulfilment process to ensure customers receive the correct products in a timely and reliable manner. While manufacturing is undertaken by approved suppliers, Pivot remains responsible for quality assurance and the customer fulfilment experience.

The fulfilment model will evolve as the business grows while maintaining a strong local customer focus.

PHASE	FULFILMENT MODEL
Pilot	Orders are received by Pivot, quality checked and delivered to the customer or made available for collection from an agreed local location.
Growth	As customer numbers increase, collection and distribution processes will be refined to improve efficiency while maintaining local service.
Future	As customer volume increases, Pivot may establish a dedicated operating facility to support inventory handling, quality assurance, customer collections and ongoing fulfilment operations.

Fulfilment Principles

- Pivot is responsible for the customer fulfilment experience.
- Products are quality checked before being provided to the customer.
- Customers receive clear communication regarding order status and collection arrangements.
- Fulfilment processes will continue to evolve to improve customer experience and operational efficiency.

Operating Assumptions

The Pivot operating model is based on the following assumptions:

- Customers create fully customisable visual designs within Pivot's approved garment products and supplier-validated production geometry.
- Sporting clubs are seeking a simpler and more efficient way to manage teamwear.
- Customers will perceive Pivot's pricing as competitive and representing good value.
- Approved suppliers will consistently meet Pivot's quality standards, pricing requirements and agreed production timeframes.
- Pivot's quality assurance process will identify product issues before customer distribution.
- Pivot can efficiently manage batch production while maintaining operational control.
- Automation will support repeatable business processes, with human oversight retained for quality assurance and exception management.
- Customers will order through dedicated club stores using the ordering model agreed between Pivot and the customer.
- Pivot will initially operate from a home-based office, with local fulfilment provided through delivery or agreed collection arrangements.
- Business growth will remain focused on the Greater Bendigo region.
- Systems and processes will continue to evolve as the business grows and operational experience is gained.

Growth Model

Pivot will pursue sustainable growth through continuous improvement, operational maturity and controlled expansion rather than rapid scaling. The business will remain focused on growing a sustainable customer base throughout Greater Bendigo.

Growth will be achieved by:

- Validating the operating model through the Phoenix pilot.
- Refining business processes based on operational experience.
- Improving systems and processes to reduce manual administration.
- Supporting more sporting clubs and organisations throughout Greater Bendigo.
- Broadening the product range to meet customer needs.
- Maintaining affordable pricing, high product quality and responsive local service.

As the business grows, Pivot will continue to invest in operational capability, systems and customer experience while maintaining a lean operating model. This will include the introduction of part-time operational support to manage fulfilment, quality assurance, customer collections and day-to-day administration as required.

As customer volume increases, a dedicated operating facility may be established to support inventory handling, quality assurance, customer collections and ongoing fulfilment operations.
